TRAVERTINE

ABOUT TRAVERTINE

Ceramic tile cave stones adopt advanced technologies such as inkjet printing and fabric, which can restore the holes, flow patterns, and color band textures of natural cave stones in high definition. Whether it is the uniform and elegant texture of the horizontal section or the visually layered and flowing effect of the vertical section, they can be reproduced through high-precision technology. Some high-end products also adopt the "precision controlled melting hole" technology, which precisely controls the shape, size, and distribution of the holes during the drying stage of the brick body, allowing the holes to grow naturally with the texture, achieving the effect of "artificial without carving, natural like nature".

CRAFTED WITH INGENUITY

STRENGTH SPEAKS FOR ITSELF

- 01** Advanced technology,
truly integrated into the industry.
- 02** Multiple specifications,
customizable, unlimited size
- 03** Multipurpose, versatile application,
arbitrary combination
- 04** Stable quality
excellent performance
